Experience

Galleri5 | Backend Engineer

Nov. 2025 – Present | Bengaluru

- **Mentor** a 3-engineer team across **3** backend services: own service architecture, define API/schema and idempotency standards, and review **10–20 PRs/week**, catching auth gaps, race conditions, and missing idempotency keys pre-release.
- Built backend (**FastAPI**) and an internal **dashboard** for AI cinematic content-generation platform exposing a unified API over **10+** image/LLM providers with async job queues and provider **retry/fallback**, sustaining **5,000+ generations/day**.
- Built a **reliability/observability layer** with structured logging and **Slack-based error alerting**, surfacing production failures in real time and cutting mean detection time from hours to minutes.
- Engineered the **Cashfree & Razorpay** payments layer with **idempotent** order creation, signed-webhook verification, and reconciliation jobs, eliminating duplicate charges and missed events.
- Designed fine-grained **RBAC** across all 3 services and led migration to **Docker on Azure** with hardened CI/CD (automated tests, linters, formatters).

Timepass | Backend Engineer

May 2024 – Oct. 2025

- Built and owned a **cross-platform in-app payment system** (**Google Play Billing + Apple Pay API**) processing **50K+ daily transactions**, with automated subscription renewals, failure recovery, and refund flows.
- Hardened **Razorpay** integration with **idempotent** order creation, signed-webhook verification, and reconciliation pipelines to prevent double-charges; instrumented **Grafana + New Relic**, improving system reliability by **40%**.
- Migrated deploys from **AWS Elastic Beanstalk** to **ECS (Fargate)** with blue-green releases via **CodeDeploy**; **zero-downtime** releases and **70% faster** deploys.
- Designed normalized schemas and **REST APIs** sustaining **sub-100ms queries** under concurrent load; built a **priority-based Celery multi-queue** to isolate high-priority payment tasks during peak traffic.
- Built a real-time **voice/video session backend** on **Agora** (RTC/RTM token generation, balance validation, MQTT-based token renewal).

Timepass | Backend Engineering Intern

Dec. 2023 – May 2024

- Eliminated **N+1 queries** and added **Redis caching** with dynamic invalidation, cutting DB load and tail latency under peak traffic.
- Integrated **AWS Secrets Manager, S3, and Rekognition** for secrets management and image analysis; automated lint, tests, and coverage via **GitHub Actions**.

Projects

Container Runtime from Scratch | Go, Linux Namespaces, Cgroups

[🐙 container-runtime](#)

- Built a minimal Docker-like **container runtime** in Go using Linux **namespaces**, **cgroups**, and **chroot** to isolate the process tree, filesystem, and hostname.
- Ran the containerized app as **PID 1** in an isolated root filesystem and enforced resource limits (PID cap, memory) via cgroups.

Qwen-Image-Edit LoRA Fine-Tuning | Python, PyTorch, DiffSynth-Studio

[🐙 qwen-image-edit-lora](#)

- Built a two-stage **LoRA fine-tuning** pipeline for **Qwen-Image-Edit-2509** performing identity-preserving person replacement while retaining pose, lighting, and scene.
- Optimized training under limited GPU memory with **FP8 training**, **gradient checkpointing/offload**, and rank-64 LoRA across attention and MLP modules.

Technical Skills

Languages: Python, Javascript, SQL, Go

Frameworks: FastAPI, Django, Node.js

Databases: PostgreSQL, MySQL, MongoDB, Redis, Pinecone

Payments: Razorpay, Cashfree, Google Play Billing, Apple Pay: idempotency, webhooks, reconciliation

AI/ML: Anthropic, OpenAI & other provider APIs; LoRA fine-tuning; prompt-engineering tooling

Cloud & DevOps: AWS (ECS/Fargate, Elastic Beanstalk, CodeDeploy, S3, Secrets Manager, Rekognition), Azure, Docker, GitHub Actions, CI/CD

Distributed/Backend: Celery, MQTT, Agora RTC/RTM, RBAC, observability (Grafana, New Relic)

Education

Achievements

- **IIT-JEE Advanced:** ranked in the top 2% of 1.2M+ candidates.
- **Competitive Programming:** LeetCode **1560** · Codeforces **1196** · 700+ problems solved.
